UNEP-WCMC. 2015. Bird taxonomy: comparison of the generic and species taxonomies in the 3rd and 4th editions of *The Howard & Moore complete checklist of the birds of the world*, and in the non-passerine volume of the *HBW and BirdLife International illustrated checklist of the birds of the world*, relating to taxa listed in the EU Wildlife Trade Regulations (which include all CITES-listed species). UNEP-WCMC, Cambridge.

The UNEP World Conservation Monitoring Centre (UNEP-WCMC) is the specialist biodiversity assessment of the United Nations Environment Programme, the world's foremost intergovernmental environmental organization. The Centre has been in operation for over 30 years, combining scientific research with policy advice and the development of decision tools.

We are able to provide objective, scientifically rigorous products and services to help decision-makers recognize the value of biodiversity and apply this knowledge to all that they do. To do this, we collate and verify data on biodiversity and ecosystem services that we analyze and interpret in comprehensive assessments, making the results available in appropriate forms for national and international level decision-makers and businesses. To ensure that our work is both sustainable and equitable we seek to build the capacity of partners where needed, so that they can provide the same services at national and regional scales.

The contents of this report do not necessarily reflect the views or policies of UNEP, contributory organisations or editors. The designations employed and the presentations do not imply the expressions of any opinion whatsoever on the part of UNEP, the European Commission or contributory organisations, editors or publishers concerning the legal status of any country, territory, city area or its authorities, or concerning the delimitation of its frontiers or boundaries. The mention of a commercial entity or product in this publication does not imply endorsement by UNEP.

UNEP promotes environmentally sound practices globally and in its own activities. Printing on paper from environmentally sustainable forests and recycled fibre is encouraged.

Introduction

This report provides an overview of taxonomic updates for bird species that the CITES Animals Committee may wish to consider in the context of updating the CITES Standard Reference.

The revised and enlarged 3rd edition of *The Howard and Moore Complete Checklist of the Birds of the World* (Dickinson, 2003)¹ is the current CITES standard nomenclatural reference for most birds (Resolution Conf. 12.11 Rev. CoP16). This is also the standard reference determining the nomenclature of birds in the EU Wildlife Trade Regulations. In 2013 and 2014, a 4th edition of this Checklist was published (Dickinson & Remsen, 2013; Dickinson & Christidis, 2014)^{2,3}. Also in 2014, the non-passerine volume of the *HBW and BirdLife International Illustrated Checklist of the Birds of the World* was published (del Hoyo & Collar, 2014)⁴.

The table below provides a comparison of the generic and species taxonomy adopted in Dickinson (2003) (and its 4th corrigenda) with that adopted in Dickinson & Remsen (2013), Dickinson & Christidis (2014), and del Hoyo & Collar (2014), relating to bird taxa listed in CITES and in the EU Wildlife Trade Regulations.

Compared to H&M₃ (Dickinson, 2003 and its 4th corrigenda), H&M₄ (Dickinson & Remsen, 2013; Dickinson & Christidis, 2014) introduces 23 species lumps, 54 species splits and 145 generic changes, while HBW & BirdLife Checklist (del Hoyo & Collar, 2014) introduces 14 species lumps, 130 species splits and 127 generic changes.

Symbols and abbreviations used

The symbol '<' is used to indicate species lumps, i.e. taxa currently recognised as separate, but that have been grouped together under another name in the associated reference.

The symbol '>' is used to indicate species splits, i.e. cases where a currently recognised taxon has been split into various taxa in the associated reference.

The symbol '→' is used to indicate generic changes that otherwise do not involve a change in the scope of the taxon in question.

The symbol '=' is used to indicate taxonomic or nomenclatural changes that do not involve a change in the scope of the taxon in question.

H&M₃ is used as an abbreviation for the 3rd edition of *The Howard and Moore Complete Checklist of the Birds of the World* (Dickinson, 2003).

H&M₄ is used as an abbreviation for the 4th edition of *The Howard and Moore Complete Checklist of the Birds of the World* (Dickinson & Remsen, 2013; Dickinson & Christidis, 2014).

HBW/BL is used as an abbreviation for the non-passerine volume of the *HBW and BirdLife International Illustrated Checklist of the Birds of the World* (del Hoyo & Collar, 2014).

N/A is used in cases where a taxon is not included in a particular reference, e.g. passerine species in the non-passerine volume of HBW/BL.
